1.2.- Se seleccionan los datos con los que se quieren trabajar y las variables numéricas que se ocuparán : largo del pico, grosor del pico, largo de la aleta y masa corporal.

```
gentoo<-penguins[153:176,c(4,5,6,7)]
```

## Gráfico de dispersión

1.- Mediante la función *pairs* se creará un gráfico de dispersión para visualizar nuestra nueva matriz

```
pairs(gentoo)
```

## Cálculo de la correlación de Pearson

Mediante la función *cor*, se calcula la correlación de Pearson

```
cor(gentoo)
```

```

2.1.1.- El primer objeto se llamará MRL, se ocuparán las variables: *masa corporal* y *\*largo del pico*. Mediante la función *\*\*ggplot\**, creará el gráfico:

```

## Modelo de Regresión Lineal Simple

### Cálculo y representación de la recta por mínimos cuadrados

1.- Con la función *lm* se calcularán datos como: el intercepto, el error, el valor crítico p-valor, entre otros

1.1.1.- Primer modelo, se ocupan las variables *largo del pico* y *masa corporal*

```
regresion<-lm(gentoo$largo_pico_mm~gentoo$masa_corporal_g,  
              data=gentoo)
